

⁴PEP Product Definition, Variant and Structure Management

The new way to build VC models

#1 solution for SAP VC modelling: easy and powerful! Benefit from our proven solution: The best SAP Add-on to build your VC model

Successful companies know how to reduce the growing complexity of products and processes in a targeted manner using variant management. It is the **control of the variant diversity** that makes it possible to serve the market optimally with modularized solutions. Configurable products have long been the key to success, surpassing individually developed variants. However, the majority of companies find it challenging to map **the variant management in an efficient way** when it comes to data. With ⁴PEP Product Definition, Variant and Structure Management, we offer an approach for a smart variant management that serves as a basis for sustainable business success.

Best Practices in Variant Management

- separation into different worlds and areas of responsibility (e.g., production and sales)
- use of a mathematically described and therefore analyzable variant model
- **reliable mapping** of changes made to variants using versions and validity periods
- decoupling of the variant modeling from SAP master data and **automatic creation** of master data at the right time

Your Benefit

- enriched Fiori User Experience for model engineers and product managers
- the simplest way to maintain and visualize SAP-VC-rules for both, high-level and low-level configuration
- seamless embedded into S/4HANA and SAP ERP
- based on SAP standard objects and on well-founded methodology VarLogic®
- control on variants throughout their entire life cycle
- savings potential of 30-50 per cent by improving data quality and by saving time

4PEP Product Definition, Variant and Structure Management allows you to define the variants of a product that is to be developed along with the structure of the product in a simple and quick way. This web-based solution in the modern SAP Fiori® technology offers you **transparency, flexibility** and **data safety** while being closely integrated into SAP standard processes.

A product is described by mapping its properties in the form of characteristics. In the early phase, it is not necessary to have SAP classes or SAP characteristics. Allowed product variants are defined using a rules set that displays the **combinatorics** between the characteristic values. The processing is then done in an **easily comprehensible matrix display** and with a **configurator** that evaluates the set of rules, followed by a characteristic value assignment and an **automatic compilation of the desired variants**.

Number	Version	Description	M.	Status	Fr.	Attachm.	Material	Material	Material
√ S-11000 (2)	3	Structure		New		0			
S-11200	1	ST Seat		Released		0	1016		
S-11100	3	ST Back		New		0	1024		
√ S-19000 (3)	6	Security Components		New		0			
> S-19000 (4)	5	ISO's Assembly		New		0			
S-19200	3	Belt Buckle		New		0	1041		
S-19100	3	Airbag		New		0	1032		
√ S-22000 (1)	3	Packaging		New		0			
S-22100	3	Packaging A		New		0	1043		
> S-22000 (2)	3	Small Parts		New		0			
> S-22000 (3)	3	Amrest		New		0			
> S-18000 (2)	4	Heating		New		0			
√ S-17000 (2)	4	Electrical Components		New		0			
S-17200	3	Control Unit		New		0	1034		
S-17100	5	Cable Harness		New		0	1035		

Figure: Product structure

The **product structure** separates the product or system into its physical elements like assemblies, sub-assemblies and parts. It displays the maximum structure of the product.

In the early phase, it is possible to model the product without SAP master data. The product structure keeps the connection to the variants or the characteristics, which means that **closed variant concepts** are supported.

Smart Click for High-Level Configuration

- each click creates VC dependencies in SAP automatically
- create relations between characteristics in graphical-matrix format
- easy to read visualization of rules

Smart Click for Low-Level Configuration

- each click creates VC dependencies in SAP automatically
- create selection conditions in your 150% BOM and routing
- easy to read visualization of rules

Smart Connect for Multi-Level Configuration

- each line creates VC dependencies in SAP automatically
- inherit characteristics values graphically from configurable header to configurable item level by drawing lines
- easy to read visualization of rules
